What are the Aurora Police MPPP Custom Target-Date Portfolios?

These are a series of portfolios (investment mixes) that are professionally designed and managed specifically for several different target retirement age groups. The Target-Date Portfolios, which make up one tier of the Plan's three-tier investment menu, were created to further simplify investing by providing a "cruise-control" alternative that automatically becomes more conservative as you get closer to retirement.

There are currently eight separate portfolios that are designed for seven distinct age groups, along with three "R Series" portfolios for retired participants. Each portfolio contains a mix of different types of investment funds (i.e. aggressive and conservative, domestic and foreign) that is established with the assistance of the Plan's investment professionals. They utilize a statistical process to determine the optimal mix designed to provide the highest return with the least amount of risk or volatility (increase/decrease in the value of your investments). The unique investment mix of every portfolio considers risk that is appropriate for each age group, based upon an average retirement age of 55, and average life expectancy (currently age 85), with appropriate investment allocations during the working years and the retirement years. Additionally, the Plan's investment consultant periodically reviews each portfolio and modifies the allocations to more conservative investments as the investors age. The pie chart shown in this profile represents the total portfolio, with each slice of the pie indicating the portion allocated to a specific mutual fund, which are predominantly the same as those funds offered in the core menu of funds.

Choosing a Target-Date Portfolio

The Target-Date Portfolios were designed to help employees easily select an appropriate option by dividing them into various age groups. Participants simply choose the portfolio that matches their age group and leave the rest to the Plan's investment professionals. To choose the proper portfolio, simply find the age group that matches your current age, which is shown in the section titled "Target Age Group" (above, upper left corner). The name of each Aurora Police MPPP Target Date Portfolio indicates the year a participant in the middle of the age group will reach the average retirement age of 55. However, the portfolios are designed for participants reaching age 55 within five years either side (5 years younger, or 5 years older) of the stated target retirement year.

What are the Aurora Police MPPP Custom Target-Date Portfolios?

These are a series of portfolios (investment mixes) that are professionally designed and managed specifically for several different target retirement age groups. The Target-Date Portfolios, which make up one tier of the Plan's three-tier investment menu, were created to further simplify investing by providing a "cruise-control" alternative that automatically becomes more conservative as you get closer to retirement.

There are currently eight separate portfolios that are designed for seven distinct age groups, along with three "R Series" portfolios for retired participants. Each portfolio contains a mix of different types of investment funds (i.e. aggressive and conservative, domestic and foreign) that is established with the assistance of the Plan's investment professionals. They utilize a statistical process to determine the optimal mix designed to provide the highest return with the least amount of risk or volatility (increase/decrease in the value of your investments). The unique investment mix of every portfolio considers risk that is appropriate for each age group, based upon an average retirement age of 55, and average life expectancy (currently age 85), with appropriate investment allocations during the working years and the retirement years. Additionally, the Plan's investment consultant periodically reviews each portfolio and modifies the allocations to more conservative investments as the investors age. The pie chart shown in this profile represents the total portfolio, with each slice of the pie indicating the portion allocated to a specific mutual fund, which are predominantly the same as those funds offered in the core menu of funds.

Choosing a Target-Date Portfolio

The Target-Date Portfolios were designed to help employees easily select an appropriate option by dividing them into various age groups. Participants simply choose the portfolio that matches their age group and leave the rest to the Plan's investment professionals. To choose the proper portfolio, simply find the age group that matches your current age, which is shown in the section titled "Target Age Group" (above, upper left corner). The name of each Aurora Police MPPP Target Date Portfolio indicates the year a participant in the middle of the age group will reach the average retirement age of 55. However, the portfolios are designed for participants reaching age 55 within five years either side (5 years younger, or 5 years older) of the stated target retirement year.
